Traceis Software Installation

Minimum requirements
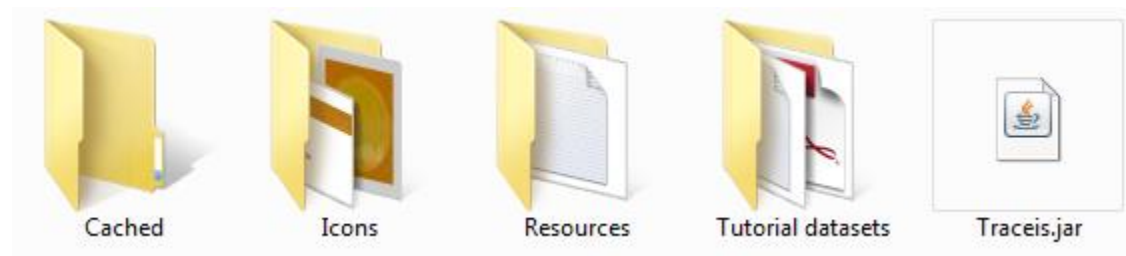

A computer (PC or Apple) running Java™, available from:

http://www.java.com/en/download/index.jsp

The computer should have more than 1M of memory.

Installation

To install, unzip the downloaded file Traceis2014-1alpha.zip (from the *Associated Software (Traceis 2014)* link). There will be a folder with the following:

Cached   Icons   Resources   Tutorial datasets   Traceis.jar

Obtaining software key

Send an email to software@makingsenseofdata.com to obtain the software key.

Running the software

To run the software, double click on the **Traceis** file (if this does not launch the software, open the Traceis file using the Java platform software).

The first time you run the software you will need to enter the key sent to you via email.
