

Traceis™ Data Exploration Studio Chi square

1 Select the statistics step

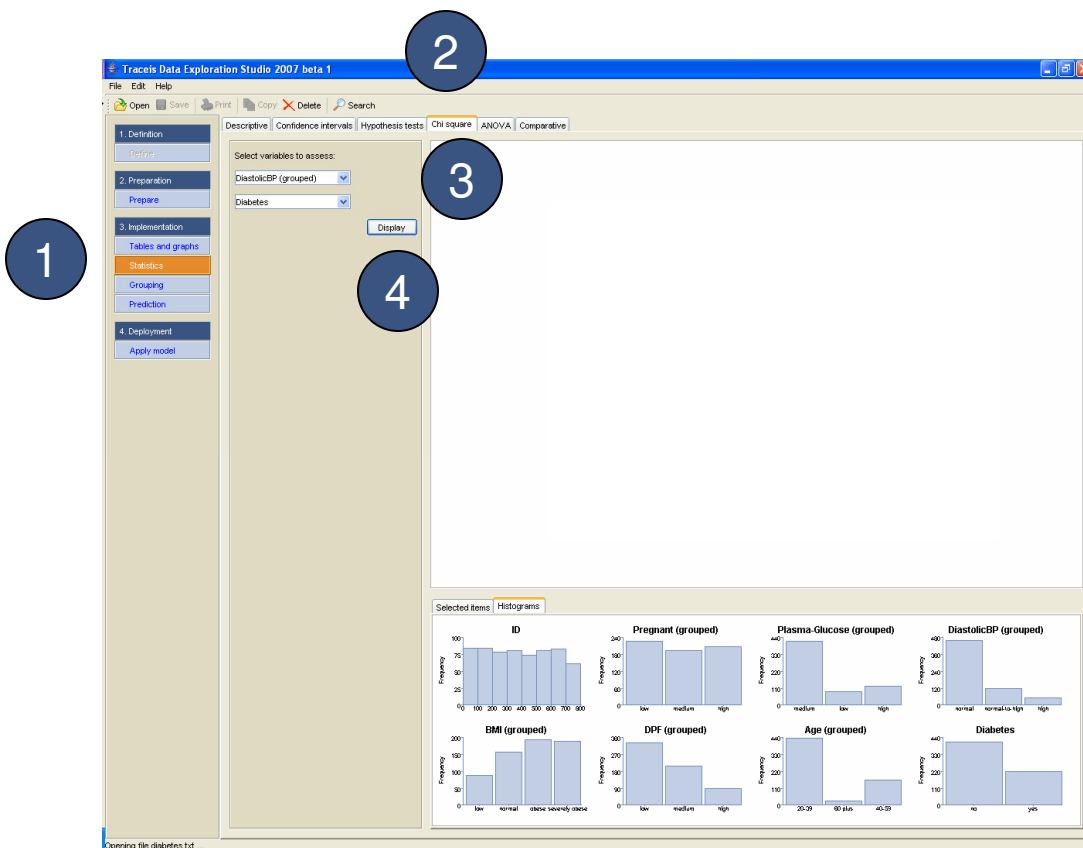

In this example, the diabetes dataset was used. First, select the statistics step.

2 Select the chi square tab

3 Select the variables to assess

Select two categorical variables to assess. In this example, the diastolicBP (grouped) and the diabetes variables were selected.

4 Display the results

MAKING SENSE OF DATA

1 View the results

The results are shown and display the actual values along with the expected values.
